Connecting to Care

ASSISTIVE TECHNOLOGY

Assistive Technology is:

A term used to describe any device, technology, tool or product, from the simplest to the most complex that can make a particular function easier or possible to perform.

From low tech to high tech devices, the latest cutting edge technology is changing the way people are communicating and accessing their environment, regardless of ability.

For people without disabilities, technology makes things easier. For people with disabilities technology makes things possible.

IMAGINE...

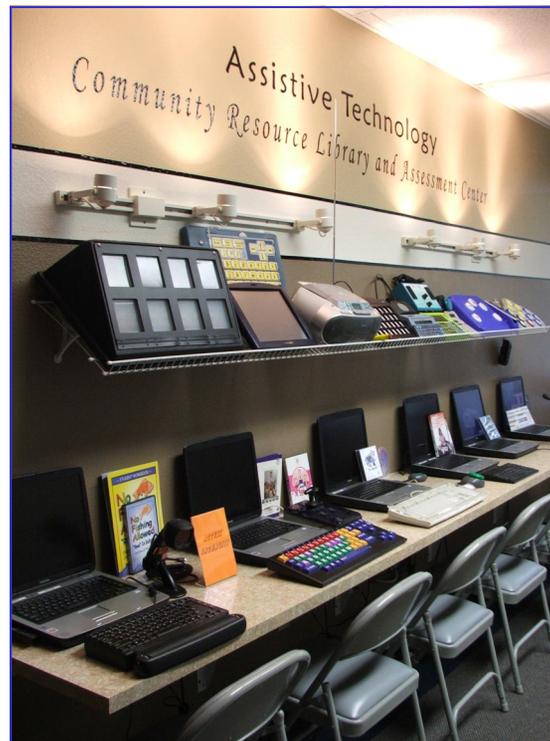

- A young child with limited mobility using Assistive Technology to control and play with a battery-adapted toy;
- An adult with autism telling a joke or expressing emotion using a speech generating device;
- A senior using screen magnification software while accessing the internet;
- A computer reading a history class assignment to a student who is blind;
- A mother with limited speech using a tablet to read a bedtime story to her child.
- A stroke victim utilizing an eye-gaze system to communicate their medical needs to their doctor

TECHNOLOGY...

Connecting to Care strives to provide the most current and applicable information to support people in need of assistive technology. From Velcro strips and mechanical grabbers, to voice recognition software. We can help identify practical technologies to simplify daily life.

Our comprehensive services include full evaluations, reports, recommendations and hands-on follow up training.

OPENING DOORS...

Connecting to Care is reaching out to people with disabilities, families, students, seniors, teachers, professionals, employers, community-based organizations, and local and state government agencies.

There is no one better qualified than you to envision the fullest potential of your child, student, client or yourself.

At Connecting to Care we help people of all abilities and ages find the technology that will allow them to fulfill their greatest potential.
